

Activity!

Using the format 'Destination' and 'Target' what do we need to add to our Route Tables? Here are the routes we need to allow.

1. Your Public Subnet enables internet traffic via your Internet Gateway
2. Your Private Subnet enables internet traffic via your NAT Gateway *(which then forwards traffic out the Internet Gateway)*

🌶️ Hot Tip: feel free to draw up any diagrams that might help or Google it if you need to 🤖
